Volunteer **commitment** | **satisfaction** | **intent to remain** remains stable or **increases** over time, and trajectories show individual differences.

?

X

X

Volunteer **commitment** | **satisfaction** | **intent to remain** varies as a function of grappling with one's own initial motivations to volunteer such that the relationship will be positive upon re-reading one's own initially stated motivation compared to not re-reading.

✓ EH4 | Volunteer **presentation anxiety** remains stable or decreases over time, and presentation anxiety trajectories show individual differences.

X? EH6 | Is there a relationship between **presentation anxiety** and **number of workshops delivered** by a volunteer?

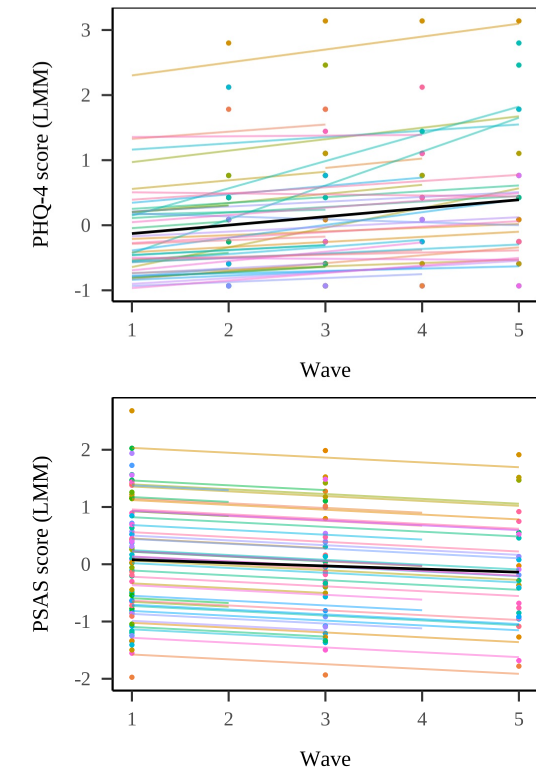

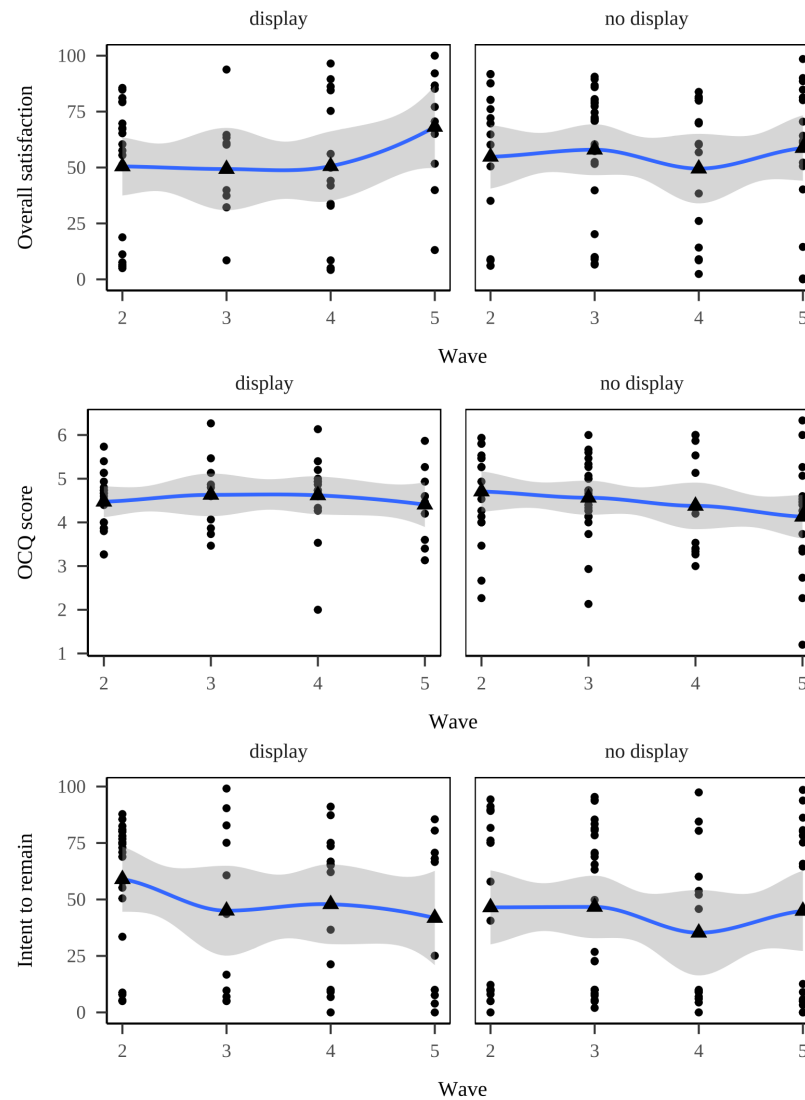

X EH5 | Does **initial volunteer commitment** predict changes in volunteer intent to remain?

X✓ EH7 | Is volunteer **attachment style associated with facets of motivation** to initialize volunteering?

X EH8 | Does **volunteer attachment style predict differences in perceived working alliance** with workshop target audiences?

 EH9 | What does the **trajectory of mental health in volunteers** look like during a campaign mandate?
